Amendment to the Claims

Claim 1 (Original): Hybrid maize seed designated 39R62, representative seed of said hybrid 39R62 having been deposited under ATCC accession number _____.

Claim 2 (Original): A maize plant, or its parts, produced by the seed of claim 1.

Claim 3 (Original): Pollen of the plant of claim 2.

Claim 4 (Original): An ovule of the plant of claim 2.

Claim 5 (Currently amended): A tissue culture of regenerable cells or protoplasts of a hybrid maize plant 39R62, representative seed of said hybrid maize plant 39R62 having been deposited under ATCC accession number _____, wherein the tissue regenerates

plants capable of expressing all the morphological and physiological characteristics of

- Da
 - Claim 6 (Previously amended): The tissue culture according to claim 5, the cells or protoplasts being from a tissue selected from the group consisting of leaves, pollen, embryos, roots, root tips, anthers, silks, flowers, kernels, ears, cobs, husks, and stalks.
 - Claim 7 (Original): A maize plant, or its parts, regenerated from the tissue culture of claim 5 and capable of expressing all the morphological and physiological characteristics of hybrid maize plant 39R62, representative seed having been deposited under ATCC accession number ______.
 - Claim 8 (Previously amended): The maize plant of claim 2 wherein said plant has been manipulated to be male sterile.
 - Claims 9-19 (Canceled)

said hybrid maize plant 39R62.

Claim 20 (Original): A maize plant, or its parts, having all the morphological and physiological characteristics of the plant of claim 2.

Claims 2143 (Canceled)

Claim 44 (New):	A method of developing a transgenic 39R62 maiz	e plant, comprising
transforming at least	one of the inbred parents of 39R62 with a transgen	e, wherein a
representative sample	e of said inbred parents have been deposited as	for GE570800 or
for GE533276, and crossing said inbred parents to produce a transgenic 39R62 hybrid		
maize plant.		

3

Claim 45 (New): The maize plant of claim 44 wherein said transgene is a transgene selected from the group consisting of: a plant disease resistance gene, an insect resistance gene, an herbicide resistance gene, a male sterility gene, and a value added trait gene.

Claim 46 (New): The maize plant of claim 45 wherein said transgene is an insect resistance gene encoding a *Bacillus thuringiensis* polypeptide, a derivative thereof or a synthetic polypeptide modeled thereto.

Claim 47 (New): The maize plant of claim 45 wherein said transgene is an herbicide resistance transgene selected from the group consisting of: a transgene conferring glyphosate resistance, a transgene conferring glufosinate resistance, a transgene conferring imadozolinone resistance and a transgene conferring sulfonylurea resistance.

Claim 48 (New):	A method of developing a backcross conversion	39R62 hybrid maize
plant, comprising ba	ckcrossing a gene into at least one of the inbred par	ents of 39R62, wherein a
representative sampl	e of said inbred parents have been deposited as	for GE570800 or
for GE5332	76, and crossing said inbred parents to produce a tra	nsgenic 39R62 hybrid
maize plant.		

Claim 49 (New): The maize plant of claim 48 wherein said gene is a transgene selected from the group consisting of: a plant disease resistance gene, an insect resistance gene, an herbicide resistance gene, a male sterility gene, and a value added trait gene.

Claim 50 (New): The maize plant of claim 49 wherein said transgene is an insect resistance gene encoding a *Bacillus thuringiensis* polypeptide, a derivative thereof or a synthetic polypeptide modeled thereto.

Claim 51 (New): The maize plant of claim 49 wherein said transgene is an herbicide resistance transgene selected from the group consisting of: a transgene conferring glyphosate resistance, a transgene conferring glufosinate resistance, a transgene conferring imadozolinone resistance and a transgene conferring sulfonylurea resistance.

Claim 52 (New): A maize plant, or parts thereof, having all the morphological and physiological characteristics of hybrid maize plant 39R62 representative seed of said hybrid maize plant having been deposited under ATCC Accession No. ______.

Claim 53 (New): A method for producing a 39R62 progeny maize plant, comprising:

- (a) crossing the maize plant or plant parts of claim 2, with a second maize plant to yield progeny maize seed; and
- (b) growing said progeny maize seed, under plant growth conditions, to yield said 39R62 progeny maize plant.

Claim 54 (New): The method of claim 53 further comprising the step of:

(c) selecting and harvesting 39R62 progeny maize plants which comprise 2 or more 39R62 characteristics described in table 1 or 2.

Claim 55 (New): A 39R62 progeny maize plant, or parts thereof, produced by the method of claim 54.

D3

Claim 56 (New):	A method of making a hybrid maize seed 39R62 comprising:
crossing an inbred m	aize plant GE570800 and GE533276, deposited asand,
respectively to produ	ce hybrid maize seed 39R62.
Claim 57 (New):	A process for isolating an inbred parent of hybrid maize plant 39R62,
representative seed o	f which have been deposited under ATCC Accession No,
comprising:	
(a) planting a co	llection of seed comprising seed of hybrid maize plant 39R62, said
collection also comp	rising seed of said inbred parent;
(b) growing plan	ts from said collection of seed;
(c) identifying a	n inbred parent plant; and
(d) selecting said	l inbred parent plant.
Claim 58 (New):	A method of making an inbred maize plant comprising:
obtaining the plant o	f claim 2 and
applying double hap	loid methods to obtain a plant that is homozygous at essentially every locus
said plant having rec	eived all of its alleles from maize hybrid plant 39R62.
Claim 59 (New):	The method of claim 58 wherein said inbred line comprises at least about
75% genetic identity	to a line selected from the group consisting of GE570800 and GE533276,
deposited as	and, respectively.
Claim 60 (New):	A method for producing a 39R62 progeny maize plant comprising:
(a) growing the	plant of claim 2, and obtaining self or sib pollinated seed therefrom; and
(b) producing su	ccessive filial generations to obtain a 39R62 progeny maize plant.
Claim 61 (Marry)	A maize plant produced by the method of claim 60, said maize plant

having received all of its alleles from hybrid maize plant 39R62.

Claim 62 (New): A method for producing a population of 39R62 progeny inbred maize plants comprising:

- (a) growing the plant of claim 2 and obtaining self or sib pollinated seed therefrom; and
- (b) producing successive filial generations to obtain a population of 39R62 progeny inbred maize plants.

Claim 63 (New): A maize plant from the inbred population of maize plants produced by claim 62, said plant having received all of its alleles from hybrid maize plant 39R62.

CorAn.

Claim 64 (New): A method for developing a maize plant in a maize plant breeding program comprising: obtaining the maize plant, or its parts, of claim 2 and, utilizing said plant or parts as a source of breeding material.

Claim 65 (New): An 39R62 progeny maize plant, or parts thereof, wherein at least one ancestor of said 39R62 progeny maize plant is the maize plant of claim 2, and wherein the pedigree of said 39R62 progeny maize plant has 2 or less breeding crosses to a plant other than 39R62.
